WEEKLY HEALTH REPORT

NATURE OF THE DATA

The data presented here are taken from the Statistical Health Reports, Form 86ab, rendered weekly to the Office of The Surgeon General by every hospital and separate dispensary in the continental United States. Troops in transit and certain small detachments are not required to submit reports for this and other reasons, total strength of reporting units has been consistently about 1 percent below the actual strength of the Army in this country. The mean strength shown for individual stations is that of Army personnel attached or assigned for medical care and does not include organizations not on the post but dependent on the station for hospitalization.

Because of the desirability of placing the information in circulation at the earliest possible time following its receipt, figures are in general shown herein as reported. Where there is some doubt as to the accuracy of the reported figures, their verification is requested, and the fact that they have been so questioned is indicated by the symbol (!).

MORBIDITY DATA

Admissions are reported only for cases hospitalized or confined to quarters and excused from duty for 24 hours or longer, except for certain cases carded for record only (chiefly venereal disease cases treated on a duty status, and deaths which occurred before admission to hospital or quarters). Admissions designated as "injury" comprise all traumatisms other than battle casualties (i.e., morbid conditions due to external causes, including poisons taken internally, results of exposure to heat, cold and light, and reactions to medications as well as various types of wounds not due to enemy action). Under present conditions there would not be any direct admissions in the continental United States properly classifiable as battle casualties. All cases other than those of injury or battle casualty are classified as "disease."

Admission rates are shown for all causes combined, for all diseases combined, for injuries and for a few specific diseases. These rates are presented on an annual basis to facilitate comparisons with corresponding rates in annual and monthly reports. Such annual rates of admission indicate the number of admissions per thousand mean strength which would occur over a year's time if the current week's experience continued for a year.

The report also shows the number of cases of the more common communicable and certain other diseases of special interest. Appended is a list of cases reported for the rarer communicable and certain other diseases.

The average proportion of the daily strength of the command which is confined to hospital or quarters (mean number of non-effectives per thousand strength) is given in the summary table for the total United States and for each of the Service Commands. This ratio may not be significant when the strength of a Command is changing markedly or when a Command has a relatively large number of General Hospitals.

The number of enlisted men discharged during the week on Certificates of Disability for Discharge (CDD) are shown for individual stations. These data should be distinguished from the figures for "honorable discharges for physical and mental disqualification" assembled by The Adjutant General's Office; the latter include discharges for inaptness in addition to CDD's and are tabulated on a somewhat different basis (e.g., the April data represent April discharges processed by the AGO during April and May plus discharges prior to April which were processed in May).

MORTALITY DATA

Recent studies indicate that the reporting of deaths on Forms 86ab is incomplete, especially in the case of deaths from injury. The resulting understatement in the mortality rate from injury may be as much as 15 percent and occasionally even more, but the death rate from disease is not materially understated. Therefore in computing mortality rates from injury and from all causes on the basis of the corresponding numbers of deaths, as shown in this report, an appropriate adjustment for the underreporting of such deaths must be made.

STATIONS WITH HIGHEST MORBIDITY RATES

Included in the report is a table listing the stations (having strength of 5000 or over) with the highest morbidity rates from all causes, from all diseases combined, from injuries, and from a few specific diseases. Not infrequently, the excessively high rates of admission for all causes and for all diseases combined reported from reception centers reflect a large number of venereal disease cases among newly inducted men. Therefore, more significant of high morbidity from disease are the rates of admission for disease excluding venereal infections existing prior to induction, which rates are also shown in the table.

HOSPITALIZATION DATA

Current hospitalization conditions are presented in terms of total beds authorized, total beds occupied, and the percent of total beds authorized which are occupied.

Total beds authorized are those defined in par. 36h of AR 40-1080, Changes No. 2 and No. 3 and do not include beds in dispensaries, convalescent facilities, venereal disease facilities and college or university training units.

Regional Hospitals are distinguished from Station Hospitals by the letters (RH) appearing after the name of the station. Likewise Convalescent Hospitals are denoted by the letters (CH).

In the case of General Hospitals there are shown, in addition, the number of Army patients admitted, the number disposed of during the week (by return to duty, transfer, death, CDD, or otherwise), and the number of such patients remaining in hospital (including convalescent facilities, if any) at the end of the week, subdivided by disease, injury, and battle casualty patients. The patient days of treatment are presented separately for hospital and for convalescent facilities. The bed capacity and beds occupied in convalescent facilities are also indicated.

EXPLANATORY MATTER

In reading the detail tables, it should be borne in mind that admission rates based on small numbers of cases are not reliable. For this reason the symbol (?) is placed after admission rates computed on the basis of 5 or fewer cases.

Where the current week's data for a particular station have not been received, the latest available figures are substituted therefor and the symbol (#) is placed after the name of the station.

WEEKLY HEALTH REPORT

FOR THE WEEK ENDING 6 OCTOBER 1944

COMMENT ON CURRENT TRENDS

CURRENT MORBIDITY IN THE CONTINENTAL UNITED STATES

All Causes: Disease and Injury:

During the week ending 6 October 1944 the admission rate from all causes increased fractionally to 595 per year per thousand strength. The current morbidity rate is the highest reported since the week ending 19 May 1944 but is about 15 percent lower than for the corresponding week of 1943.

Morbidity from all diseases combined increased by about 1 percent to 524 per thousand. The current admission rate from disease continues at about 15 percent under that for the corresponding week of 1943.

The admission rate from injury increased to 71 per thousand and is at the highest level since the week ending 4 August 1944, although being about 20 percent lower than for the corresponding week of 1943.

Respiratory Causes:

Morbidity from colds, influenza, etc. increased from 84 per thousand for the previous week to 87 per thousand for the current week. The admission rate for this week is 13 percent lower than for the corresponding week of 1943.

The admission rate from pneumonia remained at 7 per thousand and was at the highest point since the middle of July. However, morbidity from this cause continues to be about 25 percent lower than during the corresponding period of 1943.

Common Communicable Diseases:

Morbidity from venereal diseases, excluding

cases contracted prior to entry into active service, decreased sharply from the rate of 39 per thousand for the previous week to 34 per thousand for the current week. This decline follows the trend in previous months when there had always been a sharp drop in the first week of the month as contrasted with the last week of the previous month, followed by a gradual increase during the remaining weeks of the month. Morbidity from these causes is about 30 percent higher than during the corresponding week of 1943.

Morbidity from diarrhea and dysentery increased sharply to 13 per thousand from the rate of 9 per thousand for the previous week. The admission rate from this cause for the current week was notably higher than the rate for the corresponding week of 1943; this is the first time in recent months that morbidity from these causes has been higher for 1944 as compared with the corresponding week of 1943.

The number of new cases of meningitis was reported at 18, the same as for the previous week and less than half the number for the corresponding week of 1943. The number of new cases of rheumatic fever decreased to 50, which is close to the minimum figure recorded so far this year. During the current week new cases of poliomyelitis numbered 7 or about the same as the average for the previous four weeks.

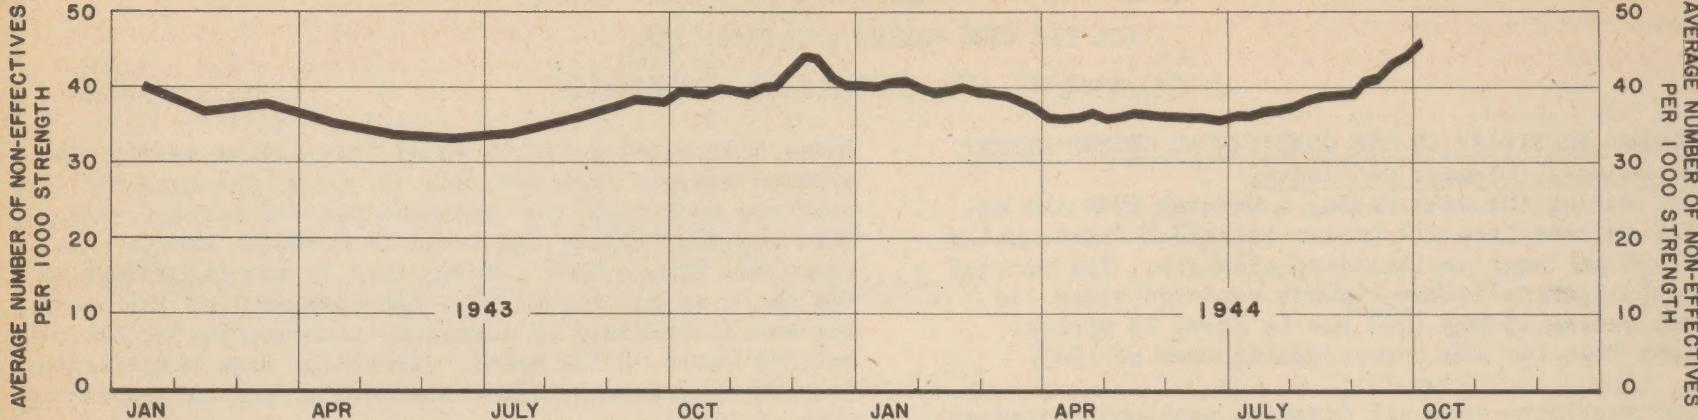

VARIATIONS IN MORBIDITY BY SERVICE COMMAND

All Causes: Disease and Injury:

The admission rate from disease increased sharply (by 10 percent or more) in the Second and Third Service Commands and the Military District of Washington. Only

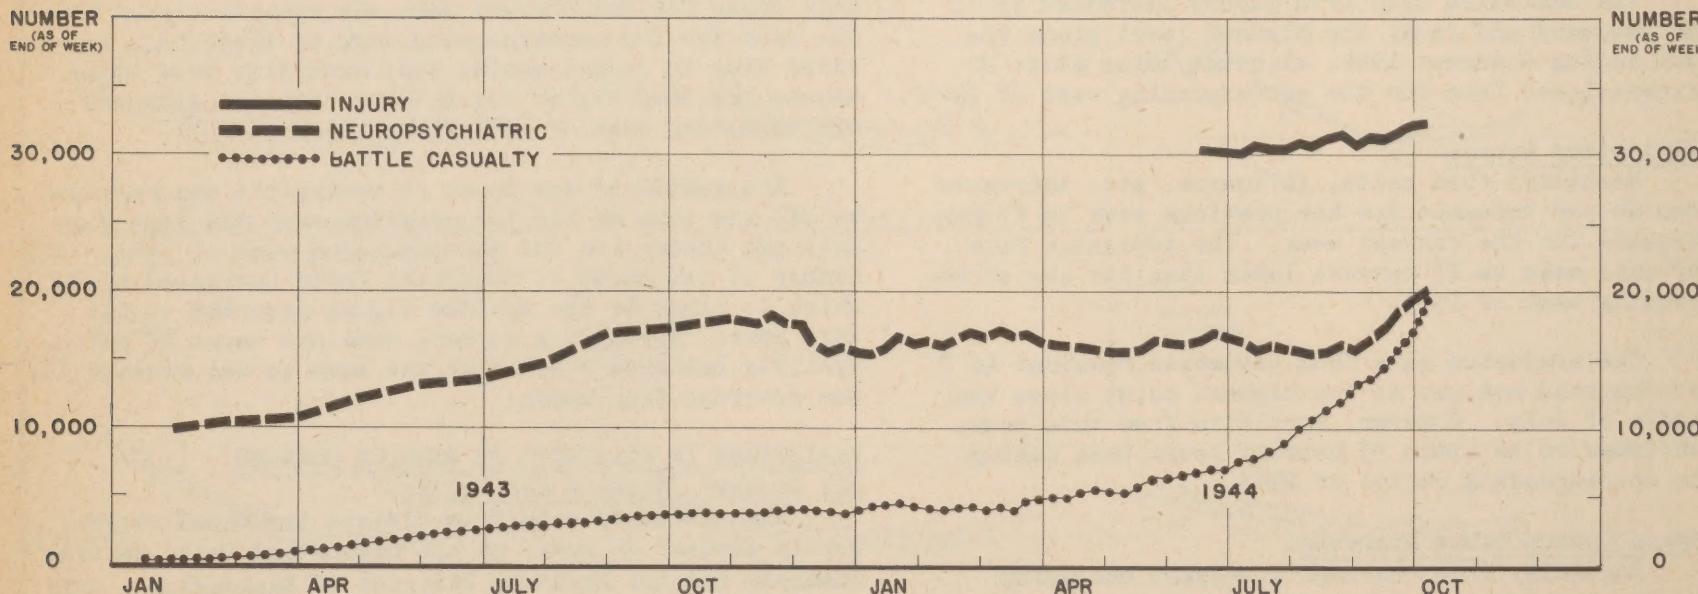

NON-EFFECTIVE RATE

CONTINENTAL UNITED STATES

PATIENTS REMAINING UNDER TREATMENT

CONTINENTAL UNITED STATES

COMMENT ON CURRENT TRENDS (CONT'D)

in the Fifth and Ninth Service Commands did significant decreases in morbidity from disease occur.

As a result, the Second Service Command reported the highest morbidity from all causes (732 per thousand) and from disease (669 per thousand). The lowest morbidity from all causes (512 per thousand) and from disease (453 per thousand) was registered in the Fifth Service Command, followed by the Eighth Service Command, which has in previous weeks reported very low morbidity.

Sharp increases in morbidity from injury were reported by the Third, Sixth, and Ninth Service Commands, while only the Fifth and Seventh Service Commands reported significant decreases. The Fourth and Sixth Service Commands with admission rates of about 80 per thousand, registered the highest morbidity from this cause, while the Military District of Washington with a rate of 42 per thousand was the lowest, followed by the First Service Command (54 per thousand).

Respiratory Causes:

The admission rate from colds, influenza, etc. increased notably (10 percent or more) in the Second and Third Service Commands. The only Service Command showing other than a fractional decrease was the Fifth, where a decline of more than 20 percent occurred. For the first time in many months half of the Commands reported an admission rate of 100 or more per thousand.

The Military District of Washington reported by far the highest morbidity from colds, influenza, etc. (168 per thousand) followed by the Second Service Command (139 per thousand). The Fourth and Eighth Service Commands, with a rate of about 70 per thousand, reported the lowest morbidity from these causes.

Morbidity from pneumonia remained about the same in all Service Commands except the Third, where a significant rise in admissions occurred. The Sixth Service Command, with a rate more than double that for the country as a whole, reported the highest morbidity from this cause.

Common Communicable Diseases:

Morbidity from "new" venereal (excluding EPTS) cases decreased in every Service Command except the First. Decreases of 10 percent or more were reported by the Second, Third, Fourth, Seventh, and Eighth Service Commands and the Military District of Washington. The Fifth Service Command reported the highest morbidity from these causes (49 per thousand), while the lowest morbidity (13 per thousand) was recorded in the Military District of Washington, followed by the Ninth Service Command (24 per thousand).

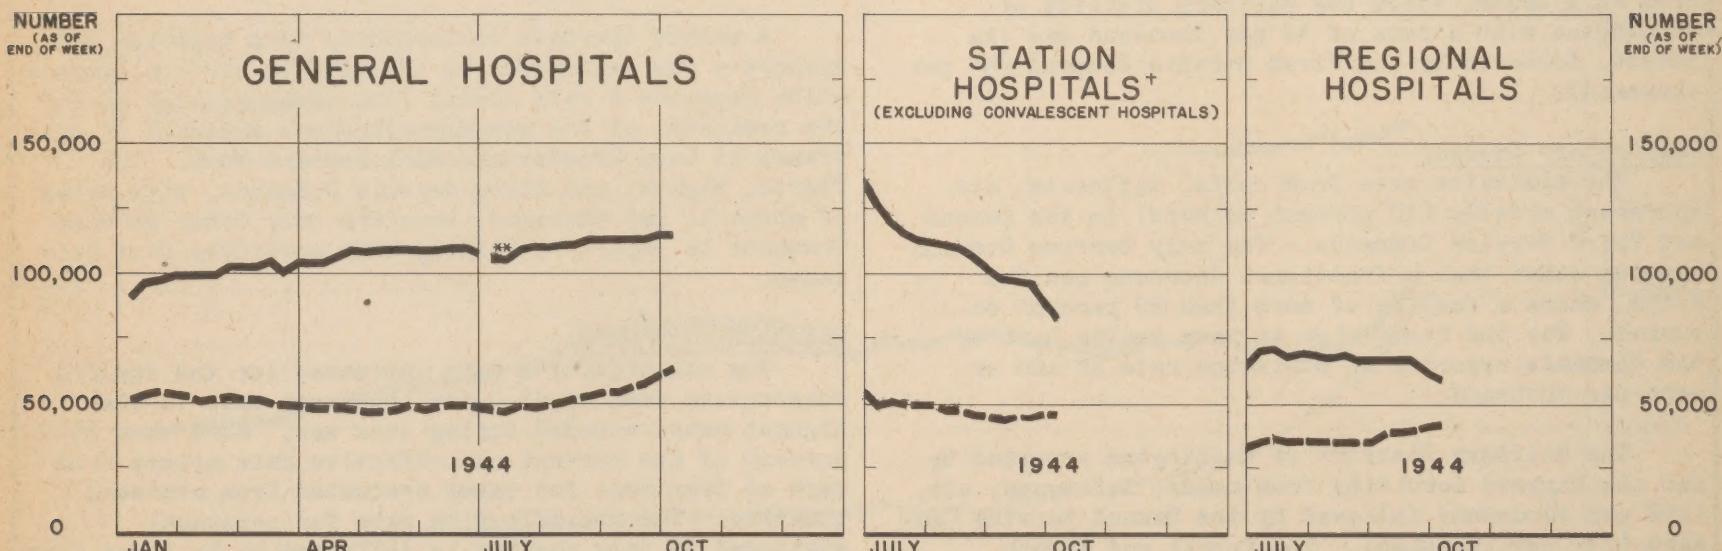

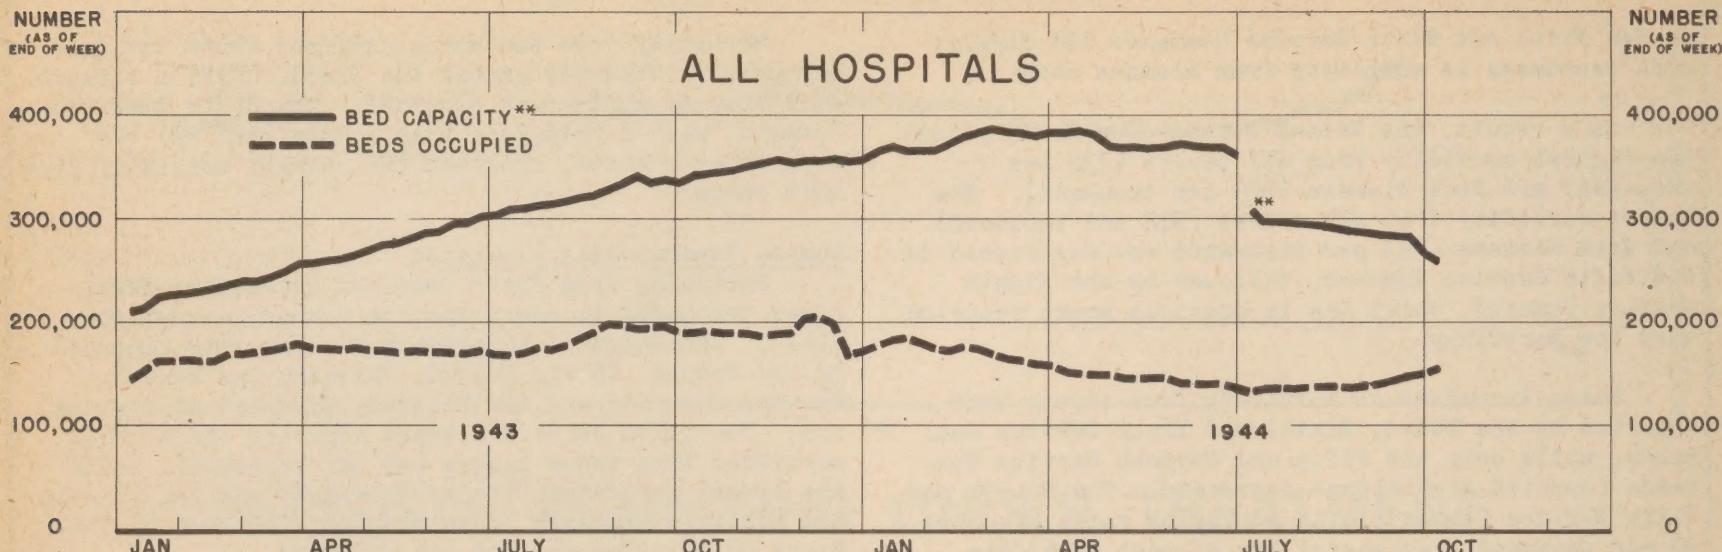

A marked increase in morbidity from diarrhea and dysentery was registered in the Seventh Service Command, which reported a rate almost five times as high as for the remainder of the country; this was a result of outbreaks at Camp Crowder and Fort Leonard Wood. The Fourth, Eighth, and Ninth Service Commands, with rates of about 11 per thousand, were the only other Service Commands to report relatively high morbidity from this cause.

NON-EFFECTIVE RATE:

The non-effective rate increased for the twelfth consecutive week to 46.0 per thousand; this is the highest rate recorded during this war. More than 25 percent of the current non-effective rate arises from days of treatment for cases evacuated from overseas theaters. The non-effective rate for personnel stationed in this country is estimated to be lower than in 1943.

HOSPITALIZATION DATA*

ARMY SERVICE FORCES, OFFICE OF THE SURGEON GENERAL
MEDICAL STATISTICS DIVISION, HEALTH REPORTS BRANCH

COMMENT ON CURRENT TRENDS (CONT'D)

PATIENTS REMAINING UNDER TREATMENT:

The total number of Army patients remaining in hospital at the end of the week represented a rate of 46.0 per thousand strength. The number of neuropsychiatric cases remaining as of October 1944 was reported at 20,056 or about 700 more than the previous week; out of the 20,056 cases 9,872 were in General Hospitals. The number of neuropsychiatric cases remaining was at the highest point during this war.

The number of non-battle injury patients remaining under treatment in hospital and quarters as of 6 October 1944 totaled about 32,000. The number of battle casualty patients remaining increased by about 2,400 to 19,536; all but 377 of these were in General Hospitals.

CERTIFICATES OF DISABILITY FOR DISCHARGE:

During the week ending 6 October 1944 the total number of enlisted men discharged by CDD was 5,282 or about 400 less than the previous week. About 45 percent of these discharges were reported by General Hospitals.

Included among the 5,282 CDD's were 1,983 neuropsychiatric cases, representing 38 percent of the total; the number of such cases among the previous week's CDD's was 1,852 or 33 percent of the total.

CURRENT HOSPITAL CONDITIONS:

The total authorized beds in General, Regional, Station, and Convalescent Hospitals as of 6 October 1944 numbered about 260,000 or 11,000 less than at the end of the previous week; this decrease was largely the result of the application of Changes No. 3, AR 40-1080 which provided for authorized beds in Station Hospitals to be based on approximately 3.5 percent of strength served. The total number of beds occupied was 155,000 (or 60 percent of the total beds authorized) which was about 4,000 more than at the end of the previous month.

The total authorized beds in General Hospitals (exclusive of beds in convalescent facilities) numbered 114,139. The total beds occupied in General Hospitals were 62,503 (or 55 percent of the authorized beds) which was about 2,400 more than at the end of the previous week and the highest number ever reported.

The bed capacity of convalescent facilities in General Hospitals was 21,513. The total beds occupied in such convalescent facilities was 7,601 or 35 percent of the total bed capacity. The above figures include 10,372 convalescent facilities beds (3,518 or 34 percent occupied) at the six General and Convalescent Hospitals.

On page 27 there are presented summary data on Army and non-Army patients at General Hospitals as of 6 October 1944. Also shown is a subdivision of hospital beds available in General Hospitals.

Station Hospitals (as distinct from Regional and Convalescent Hospitals) reported about 82,000 total authorized beds, while Regional Hospitals reported about 60,000 beds. The number of beds occupied at Station Hospitals was about 46,000 or 56 percent of total authorized beds. The beds occupied at Regional Hospitals numbered about 42,000 or 70 percent of total authorized beds.

Not included among the station hospitals are 12 which are designated as Convalescent Hospitals (ZI). These hospitals reported 4,295 authorized hospital beds (3,694 or 86 percent occupied) and in addition 11,874 beds in convalescent facilities (3,483 or 29 percent occupied).

Fifteen stations reported more beds occupied as of 6 October 1944 than authorized.

SUPPLEMENTARY HEALTH REPORT

HOSPITALIZATION CONDITIONS AT STATION AND REGIONAL HOSPITALS

NATURE OF THE DATA:

This Supplementary Health Report is the first of a series presenting data on authorized hospital beds and beds occupied in relation to military strength served by each Station and Regional Hospital. The military strength shown in this report is that of all organizations dependent for Station Hospital care. Therefore, for individual Regional Hospitals, the strength shown only provides a basis for estimating Station Hospital bed requirements.

The data are grouped by Service Command and further classified according to ASF and AAF Station and Regional Hospitals. It should be noted that General Hospitals and Convalescent Hospitals (Z.I.) are not included in this Supplementary Report.

The military strength served, as reported here, includes in addition to U.S. Army personnel other U.S. armed forces, allied and neutral armed forces, prisoners of war, and personnel of Italian Service Units. Accordingly, in most instances, the strength data in this report are larger than the corresponding figures in the Weekly Health Report which includes only U.S. Army personnel dependent for medical care (as distinguished from hospitalization). For example, a large station with a strength of 20,000 U.S. Army personnel may provide both medical care and hospitalization for such personnel at a number of dispensaries and at the Station Hospital; in addition, the Station Hospital may provide hospitalization for a nearby installation with a strength of 1,000 U.S. Army personnel which has only a dispensary of its own. The strength used in this report for the large station would be 21,000

whereas only 20,000 would be shown on the Weekly Health Report, while the 1,000 strength at the nearby station would be accounted for by that station, shown separately.

The total strength of the Service Commands and the country as a whole, as contained in this report, are not strictly comparable with the figures in the Weekly Health Report for the week ending 29 September 1944. This is because the strength figures in this Supplementary Report include other than U.S. Army strength but exclude U.S. Army strength served by Convalescent Hospitals and by General Hospitals (about 6,000 Station Hospital beds are currently provided at General Hospitals located on or near large posts; for example, Ft. Dix, N.J. and Tilton G.H.).

The figures for military strength served have been obtained from the Station and Regional Hospital reports and thus, in most instances, are only approximate. There is present the possibility that the listing of military strength served is not complete or wholly accurate on such reports so modification and corrections of such data have been made where possible.

The data on authorized and occupied hospital beds are not in all instances in exact agreement with corresponding data published in the Weekly Health Report for the week ending 29 September 1944 because in the latter figures for the previous week had to be used in some instances. Late and corrected reports received in time for inclusion in this

SUPPLEMENTARY HEALTH REPORT

HOSPITALIZATION CONDITIONS AT STATION AND REGIONAL HOSPITALS

Supplementary Report have been correspondingly substituted.

The ratios of authorized and occupied beds per thousand military strength served are shown for all Station Hospitals but not for individual Regional Hospitals. As explained above, such ratios would not be significant since beds authorized and occupied at Regional Hospitals are only partly in respect to military strength served on a Station Hospital basis and since there are also included patients receiving General Hospital care.

In a few instances, such as at Ordnance Depots (which have small military strengths), there are relatively small numbers of authorized beds, primarily for the care of civilian employees. Relating such beds to military strength results in abnormally high ratios which are obviously not significant. Also, several AAF Station Hospitals which act in part as debarkation stations show relatively high ratios, reflecting the activities of these installations.

SPECIAL COMMENTS:

For the United States as a whole, the number of beds occupied at all Station and Regional Hospitals combined represented 25 per thousand military strength served; for Station Hospitals the corresponding figure was 21 per thousand, while for Regional Hospitals it was 31 per thousand (as indicated previously, this figure is higher in part because of the functions of these hospitals). For all ASF ^{STATION} hospitals combined the ratio of beds occupied to strength served was 23 per thousand, while for all AAF ^{STATION} hospitals combined the

corresponding figure was 17 per thousand.

Considering the data by Service Commands, it may be noted that for ASF Station Hospitals, the First, Second, and Seventh Service Commands reported lower than average occupancy ratios (all at about 15 per thousand), while the Fifth and Ninth reported above-average ratios (about 30 per thousand). Similarly, for AAF Station Hospitals the highest occupancy ratio was reported in the Third Service Command (30 per thousand), while the lowest such ratios were in the First and Seventh Service Commands (14 per thousand).

The data for 29 September 1944 presented here are peculiarly effected by the fact that Changes No. 3, AR 40-1080 was issued about a week earlier. These changes in regulations provided for authorized beds at Station Hospitals to be based on approximately 3.5 percent of strength served but with due consideration for special local problems or conditions. It is therefore anticipated that the ratio of authorized beds to military strength served will, for some stations, be lower in the future.

Out of the 86,648 beds occupied at all Station and Regional Hospitals combined, there were 3,154 (or almost 4 percent) occupied by civilians. The following stations reported 50 or more beds occupied by civilians: Cp. Haan, Calif (104); Ft. McPherson, Ga. (82); Los Angeles POE, Calif. (67); Drew Fld., Fla. (63); MacDill Fld., Fla. (59); Ft. Bragg, N.C. (54); and Coral Gables, Fla. (53).
